

CENTER FOR DIAGNOSIS, THERAPY AND RESEARCH IN OCCUPATIONAL THERAPY (CDSRE)

The Center for Diagnosis, Therapy and Research in Occupational Therapy (CDSRE) is a structure affiliated with the Institute of Occupational Therapy (IET). It serves as a clinical, educational, and research setting that welcomes students completing pre-professional internships under the close supervision of occupational therapists and fieldwork educators appointed by IET.

CDSRE fulfills a threefold mission encompassing clinical, pedagogical, and scientific dimensions. It serves as:

- a center dedicated to occupational therapy assessment and diagnosis, based on the most relevant and up-to-date conceptual models;
- a rehabilitation setting grounded in evidence-based practice;
- a learning environment that promotes high-quality professional training through structured and supervised training standards;
- an academic training setting in real-life (in vivo) conditions;
- a hub for the development of interdisciplinary research projects in rehabilitation.

The interventions provided take into account the patient's overall life context, including the family, school, and broader multidisciplinary team. The Center provides students with the opportunity to develop comprehensive competencies in assessment, intervention, parent guidance, and interprofessional collaboration.

Open to individuals of all ages, regardless of background or diagnosis, CDSRE primarily serves families from disadvantaged socio-economic backgrounds through an accessible fee policy to ensure equitable access to care for all.
