## Programming 3

1. Course number and name: : 020IF3CI4 Programming 3
2. Credits and contact hours: 2 ECTS credits, $2 \times 1: 15$ contact hours
3. Name(s) of instructor(s) or course coordinator(s): Maroun Boulos
4. Instructional materials: Course handouts
5. Specific course information
a. Catalog description:

Programming and algorithms with Categorical Abstract Machine Language (CAML) - variables, arithmetic expressions and operators, primitive data types, data input and output, built-in composite data types, simple statements, control statements, logical expressions, relational and logical operators, function definition and call, functions from external modules - array - dynamic programing - recursive structures (lists, trees) - LIFO - FIFO - complexity - graph - propositional logic deterministic and non-deterministic finite state automata - regular expressions
b. Prerequisites: 020IF1CI2 Programming 1
c. Required: Required

## 6. Educational objectives for the course

a. Specific outcomes of instruction:

- Design and construct algorithms to solve scientific problems
- Write the code for recursive sorting algorithms using recursive functions
- Calculate time complexity for the sorting algorithms
- Construct automata to recognize given language
b. PI addressed by the course:

| PI | 1.3 | 2.4 | 7.1 |
| :--- | :---: | :---: | :---: |
| Covered | x | x | x |
| Assessed | x | x | x |

7. Brief list of topics to be covered

- Introduction to CAML, simple statements using print function and arithmetic operators (1 lecture)
- Variables, expressions, data types, conversion between data types, input function (1 lecture)
- Logical tests and conditional control structures (1 lecture)
- Functions from external modules (1 lecture)
- Iterative control structures (while and for loops) (1 lecture)
- Function definition and call (1 lecture)
- Recursion (2 lectures)
- Array and iterative algorithms, their traversal, searching through them, selecting elements, sort (1 lecture)
- Lists recursive constructions and recursive algorithms, their traversal, searching through them, selecting elements, sort ( 2 lectures)
- Trees and graphs (2 lectures)
- Deterministic and non-deterministic finite state automata - regular expressions (2 lectures)
- Propositional logic (1 lecture)
